AUTOMATED PACKAGE DELIVERY LOCKER

The Vidir Automated Package Delivery Locker is an automated storage and retrieval system that provides the perfect solution to package delivery and parcel pickup requirements for Apartment Buildings, Condos, Dorms and more!

INTUITIVE SOFTWARE

Our software allows automatic emailing or text messaging to residents when packages arrive, with a user friendly interface for quick and easy parcel pickup any time of the day. Package drop-off is simple, allowing unattended use for Delivery Personnel. Unique passcodes are generated each time a locker is filled, to keep packages secure until they are picked up.

ALL-METAL DESIGN

The All-Metal Locker design provides high security protection, and peace of mind for stored packages.

VERTICAL STORAGE

The Locker makes use of wasted vertical space to allow a larger number of storage lockers in a narrower footprint. There is no need for expansive widths to provide the number of lockers needed.

ERGONOMICS

The ergonomic height of delivery for every locker ensures maximum availability and accessibility for all users. Uncomfortable and unnecessary bending or straining to access lockers is thereby eliminated.

- User friendly drop off & pick up interface
- Automatic emailing/texting of resident when a package has arrived for them
- Security locks and password protection to keep packages safe while awaiting pickup
- Utilizes overhead space to increase storage availability over horizontal locker storage
- Ergonomic access points for all lockers
- Available options for height and width, and multiple locker arrangements to fit your needs
- Report generation for access logs and usage statistics
- Available RAL Color change to complement your decor

Safe Handling • Easy Access • Maximum Storage • Fast Retrieval • Small Footprint
